## Biographical / Historical

Stephen Kellert was the Tweedy Ordway Professor of Social Ecology at the Yale School of Forestry and Environmental Studies (renamed the Yale School of the Environment in 2020). Born in New Haven, Connecticut in October 1944, Kellert received his BA from Cornell in 1966 with a major in social psychology and minor in biology. He earned his PhD in sociology from Yale in 1972. He joined the Yale faculty as an assistant professor in 1977 and was promoted to associate professor in 1980, and professor in 1988. Kellert's early work focused on the perceptions of animals by a variety of social groups, conducting studies and surveys including for the United States Fish and Wildlife Service.

In the early 1980s, Kellert was introduced to the concept of biophilia discussed in the work of Harvard entomologist Edward O. Wilson. This hypothesis explored humans' connections with the natural world through a variety of perspectives. Kellert's research and teaching turned toward these explorations of humans' multi-faceted relationship with the natural world including its religious, psychological, historical, political, cultural, and ethical dimensions. Kellert published over 150 works during his career, including co-editing *The Biophilia Hypothesis* with Wilson in 1993. Kellert's works aimed at explaining this relationship and attitudes to both academic and popular audiences.

In addition to research, Kellert consulted on a number of biophilic design projects, including Kroon Hall and the Chemistry Building on the Yale campus, the Goldman Sachs office building and Bank of America office building in New York City, Sidwell Friends Middle School in Washington, D.C., and others. Kellert remained active in a variety of ecological causes and served on the board of directors of Bio-Logical Capital. He received recognition from local, state, and national organizations for his work in environmental conservation.

## Collection Contents

### Series I: Writing and lecture files, 1967–2015

This series includes Kellert's published and unpublished articles, book chapters, conference papers, and studies. This series also includes publications in popular media and organizational newsletters as well as copies of lectures and public talks.

This series is arranged into two groupings: Writing files and Lecture files.

#### Writing files

This grouping includes Kellert's writings for academic and popular audiences as well as conservation organizations and other environmental groups. Includes published book chapters, academic journal articles, magazine articles, newsletter contributions, and draft papers at various stages of the development process that Kellert authored or co-authored.

Writing files are arranged alphabetically by title.
