HISTORICAL NOTE

The Geographical Surveys West of the 100th Meridian, also known as the Wheeler Survey, grew out of the Army's desire to create maps featuring the geological aspects of the West, man-made improvements, and the "conformation, obstacles and resources of the country." Commanded by Lieutenant George Montague Wheeler, the survey was originally intended to cover the territory lying south of the Central Pacific Railroad, but grew in scope by 1872 to a mapping of all of the United States west of the 100th meridian. The survey ended on June 30, 1879, when the bill creating the U. S. Geological Survey became effective.

Scope and Contents

The collection contains letterpress copies of letters signed by George M. Wheeler and other officers of the survey, registers of correspondence sent and received, records of meteorological and topographical observations, atlas sheets, and photographs and stereoscope views of the territory covered by the expeditions.

General note

Accompanied by typed calendar.
